

...SPACE...

WHAT LURKS OUT THERE?

Space, one of the possible wonders of the universe. What actually is out there? Are there aliens? Nobody knows for sure but scientists have discovered that there used to be water on the planet Mars. Could that mean that we on Earth are not alone? Could there possibly be aliens out there, roaming planets unseen?

The sun, one of the hottest gas balls ever to be known in history, is warming the Earth up. This is causing climate change...

...SO...

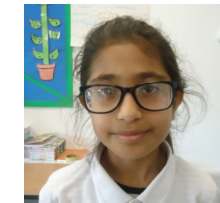

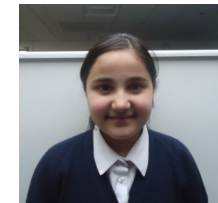

IF WE DON'T DO ANYTHING, LITERALLY ANYTHING, ABOUT CLIMATE CHANGE, THEN OUR PLANET IS DOOMED! WE NEED TO START PLAYING A PART TO SAVE IT.

Bowesfield News

Science Edition June 2019

We proudly welcome three new reporters to our news team for this issue.

Y2 Visit to the Life Centre

Y2 visited the Life Centre in Newcastle as part of their work on plants. They had a great time learning and taking part in lots of fun activities.

Year 3 Life Centre Visit

We visited the Life Centre as part of our science topic on rocks and soil.

We experimented with soil to test which held more water, soil or sand. We also organised and matched rocks to their description.

We used funnels and other scientific equipment.

We went to the Alien Invasion exhibition and saw alien characters from different movies. Can you guess

which one is an alien?

We watched a science show which was about having fun with science in the kitchen.

The 4D ride made us think we were actually on an alien mission!

We all went to the game area and we had lots of fun. There were lots of games to play.
