	Concrete objects	Pictorial representations	Abstract method
<p>Addition</p> <p>Adding two 3-digit numbers with exchange</p>	<p>Use place value equipment to enact the exchange required.</p>  <p><i>There are 13 ones. I will exchange 10 ones for 1 ten.</i></p>	<p>Model the stages of column addition using place value equipment on a place value grid.</p> 	<p>Use column addition, ensuring understanding of place value at every stage of the calculation.</p> $\begin{array}{r} \text{H T O} \\ 126 \\ + 217 \\ \hline 343 \end{array}$ $\begin{array}{r} \text{H T O} \\ 126 \\ + 217 \\ \hline 43 \\ \text{1} \end{array}$ $\begin{array}{r} \text{H T O} \\ 126 \\ + 217 \\ \hline 343 \\ \end{array}$ <p>$126 + 217 = 343$</p> <p>Note: Children should also study examples where exchange is required in more than one column, for example $185 + 318 = ?$</p>

Subtraction

3-digit number – up to 3-digit number, exchange required

Use equipment to enact the exchange of 1 hundred for 10 tens, and 1 ten for 10 ones.

on a grid.

Draw the required exchange place value

$175 - 38 = ?$
I need to subtract 8 ones, so I will exchange a ten for 10 ones.

Use column subtraction to work accurately and efficiently.

$$\begin{array}{r} \text{H T O} \\ 1 \cancel{7} 5 \\ - 38 \\ \hline 137 \end{array}$$

$175 - 38 = 137$

If the subtraction is a 3-digit number subtract a 2-digit number, children should understand how the recording relates to the place value, and so how to line up the digits correctly. Children should also understand how to exchange in calculations where there is a zero in the 10s column.

H	T	O

A place value chart with columns labeled H, T, and O. The top row shows 500 blocks in the H column, 0 blocks in the T column, and 6 blocks in the O column. The bottom row shows 30 blocks in the T column and 28 blocks in the O column. A horizontal line is drawn under the bottom row.

Multiplication

Multiplying a 2-digit number by a 1-digit number, expanded column method

Use place value equipment to model how 10 ones are exchanged for a 10 in some multiplications.

$$3 \times 24 = ?$$

$$3 \times 20 = 60$$

$$3 \times 4 = 12$$

$$3 \times 24 = 60 + 12$$

$$3 \times 24 = 70 + 2$$

$$3 \times 24 = 72$$

Understand that multiplications may require an exchange of 1s for 10s, and also 10s for 100s.

$$4 \times 23 = ?$$

$$4 \times 23 = 92$$

$$5 \times 23 = ?$$

$$5 \times 3 = 15$$

$$5 \times 20 = 100$$

$$5 \times 23 = 115$$

Children may write calculations in expanded column form, but must understand the link with place value and exchange.

Children are encouraged to write the expanded parts of the calculation separately.

$$5 \times 28 = ?$$
